Market research and strategic analysis

Helping businesses make better-informed decisions through reliable evidence and practical recommendations.

Marketing Tropper Brochure

Turning Market Insight into Strategic Advantage

Professional market research and strategic marketing consultancy.

We help organizations understand their internal capabilities, external market conditions, customers, competitors and growth opportunities.

WHY MARKET RESEARCH MATTERS

Make Better Strategic Decisions:
Organizations operate in complex and competitive markets. Decisions about products, customers, pricing, expansion and investment should be based on evidence rather than assumptions.

Marketing Trooper uses internal and external analysis to help clients:

- Identify their strengths and weaknesses
- Understand market opportunities and threats
- Evaluate strategic options
- Assess competitors
- Understand customer needs
- Improve resource allocation
- Reduce strategic risk
- Create sustainable competitive advantage

How the analysis supports strategic decisions?

1. Identify the current position:

We establish where the organisation is performing well and where improvement is required.

2. Identify strategic opportunities

Research can reveal new customer groups, emerging trends, new distribution channels, or gaps in the market.

3. Identify potential threats

Analysis helps organisations prepare for competition, changing customer expectations, new regulations, technological disruption, and economic pressures.

4. Capabilities with opportunities

A business should pursue opportunities that fit its resources, skills, reputation, and financial capacity.

5. Compare strategic options

Different options can be assessed according to: Potential market demand, Cost and investment required, Expected returns, Level of risk, Organizational objectives.

6. Make evidence-based recommendations

The final outcome is set of prioritised strategic options, supported by research and analysis

Internal analysis examines

- Financial performance
- Resource and capabilities
- Employees and skills
- Technology and systems
- Products and service
- Brand reputation
- Operational efficiency
- Marketing performance
- Customer relationships

External analysis examines

- Market trends
- Customer behaviour
- Competitors
- Economic conditions
- Technology
- Government policy
- Legal requirements
- Social and environmental change

Internal and External analysis provide a complete view of an organizations current position.

Understanding What the Organizations Can Do

Internal analysis identifies the resources, capabilities, systems and activities that influence performance.

A resource audit reviews the organizations available resources. This may include: Financial resources, Physical facilities, Equipment, Technology, Employees, Management expertise, Brand reputation, Customer data, Supplier relationships, Intellectual property

Understanding whether the organization has the resources required to implement a proposed strategy.

Internal SWOT analysis

The internal elements of SWOT focus on: Strength, Weakness

Strength may include strong customer relationships, skilled staff or an established brand. Weakness may include limited digital capability, high operating costs or narrow product range.

Summarising key internal findings in a simple and practical format

VRIO analysis

VRIO evaluates whether a resource or capability is: Valuable, Rare, Difficult to imitate, Organised effectively.

Identifying resources that may create sustainable competitive advantage.

Functional analysis

Functional analysis examines the performance of key business functions, including: Marketing and sales, Finance, Human resources, Operations, Information technology, Customer service, Research and development

Identifying areas of strength, inefficiency, duplication or underperformance.

THE INTERNAL ENVIRONMENT ANALYSIS

Our Internal Analysis Service

Marketing Trooper can help organizations to:

- Review internal capabilities
- Analyse business performance
- Identifying operational weaknesses
- Assess marketing effectiveness
- Evaluate resources and competencies
- Identify sources of competitive advantage
- Recommend areas for improvement

Understanding the Market and Competitive Environment

External analysis examines factors outside the organization that may create opportunities or threats

Customer and market analysis

Customer research can examine: Customer needs and expectations, buying behaviour, motivations, customer satisfaction, price sensitivity, preferred communication channels, Unmet needs, Market size and growth

Research methods may include: Surveys, Interviews, Focus groups, Observations, online research, customer data analysis

Useful for: Understanding target markets and developing products that meet genuine customer needs.

Strategic group analysis

Strategic group analysis maps competitors according to factors such as: Price level, Product range, quality, market coverage, distribution method

Useful for: Showing where competitors are positioned and identifying less crowded market spaces.

External SWOT analysis

The external elements of SWOT focus on: Opportunities, Threats

Opportunities may include market growth, new technologies, changing customer needs or new partnerships. Threats may include new competitors, falling demand, rising costs or changes in regulation.

Useful for: Converting external research into clear strategic priorities

PESTLE analysis

PESTLE assesses the wider macro-environment:

- Political: Government policy, trade rules, Public spending
- Economic: Inflation, interest rates, income levels, unemployment
- Social: Lifestyle, demographics, culture, consumer attitudes
- Technological: Digital platforms, automation, e-commerce, innovation
- Legal: Consumer law. Employment law, data protection, regulations
- Environmental: Climate change, sustainability, waste, resource availability

Useful for: Identifying major external trends that could affect future strategy

Competitor analysis

Competitor analysis compares the organizations with current and potential competitors.

Area of comparison may include: Product range, pricing, quality, customer service, brand value, digital presence, distribution, promotional activity, customer reviews, competitive strength and weakness

Useful for: Identifying market gaps and opportunities for differentiation.

THE EXTERNAL ENVIRONMENT ANALYSIS

Porter's Five Forces

This framework examines the level of competition within an industry

- Competitive rivalry
- Threat of new entrants
- Bargaining power of suppliers
- Bargaining power of buyers
- Threat of substitute products or service

Useful for: Accessing industry attractiveness, profitability and competitive pressure

OUR RESEARCH PROCESS

1. Briefing

We clarify your objectives, challenges, target market, and key research questions.

2. Research design

We select the most suitable research methods and analytical frameworks.

3. Data collection

We gather relevant internal, customer, competitor, and market information.

4. Analysis

We interpret the evidence and identify meaningful patterns, risks, and opportunities.

5. Strategic recommendations

We present practical recommendations and prioritised strategic options.

6. Review and support

We can support implementation, monitoring, and future strategic reviews.

Creative Research Solutions for Different Business Needs

Different internal and external analysis approaches require different levels of research, time, expertise and resources.

Therefore: different approaches are priced at different levels depending on the scope, complexity, research methods, data requirements and depth of recommendations required.

Pricing will be discussed after the initial consultation and agreement the clients specific needs. Individual prices will include in invoice.
